In an era characterized by digital expedience, *Civic Design In An Age Of Digital Expediency* provides a detailed examination of the challenges facing civic design in the 21st century. This thought-provoking book explores how to navigate the complex landscape of digital technologies and their impact on civic life and engagement.

The book begins by outlining the key challenges facing civic design in the digital age. These include the erosion of public space, the rise of digital inequality, and the increasing reliance on digital technologies for civic participation. The author argues that these challenges are not insurmountable, but they require a fundamental shift in the way we think about and design civic spaces.

The book then offers a series of case studies that demonstrate how civic design can be used to address the challenges of the digital age. These case studies include projects that have used digital technologies to create more inclusive public spaces, bridge the digital divide, and increase civic participation. The author argues that these projects provide a model for how civic design can be used to create more equitable and sustainable cities.

Civic Design In An Age Of Digital Expediency is a timely and important book that provides a roadmap for how to design civic spaces that are responsive to the challenges of the 21st century. The book is essential reading for anyone interested in civic design, urban planning, or the future of cities.

Table of Contents
