A comprehensive overview of the latest research and clinical advances in the diagnosis and management of lung cancer in pets.

Lung cancer is the most common type of cancer in dogs and cats, and it is a leading cause of death in both species. The diagnosis of lung cancer can be challenging, and the treatment options are often limited. However, there have been significant advances in the diagnosis and management of lung cancer in pets in recent years, and this book provides a comprehensive overview of these advances.

The book is divided into three sections. The first section covers the basics of lung cancer, including the different types of lung cancer, the causes of lung cancer, and the clinical signs of lung cancer. The second section covers the diagnosis of lung cancer, including the different diagnostic tests that are available and the interpretation of these tests. The third section

covers the treatment of lung cancer, including the different treatment options that are available and the prognosis for pets with lung cancer.

This book is a valuable resource for veterinarians who are interested in learning more about the diagnosis and management of lung cancer in pets. It is also a valuable resource for pet owners who are dealing with a pet that has been diagnosed with lung cancer.

Table of Contents

- 1.
2. Basics of Lung Cancer
3. Diagnosis of Lung Cancer
